

~~«Dårlige data dreper
driftsoverskuddet ditt»~~

DATA

or

Die

60 years of pioneering

The aquaculture industry has undergone an **evolutionary** journey. Development has never moved faster, and the pace of innovation is **accelerating**.

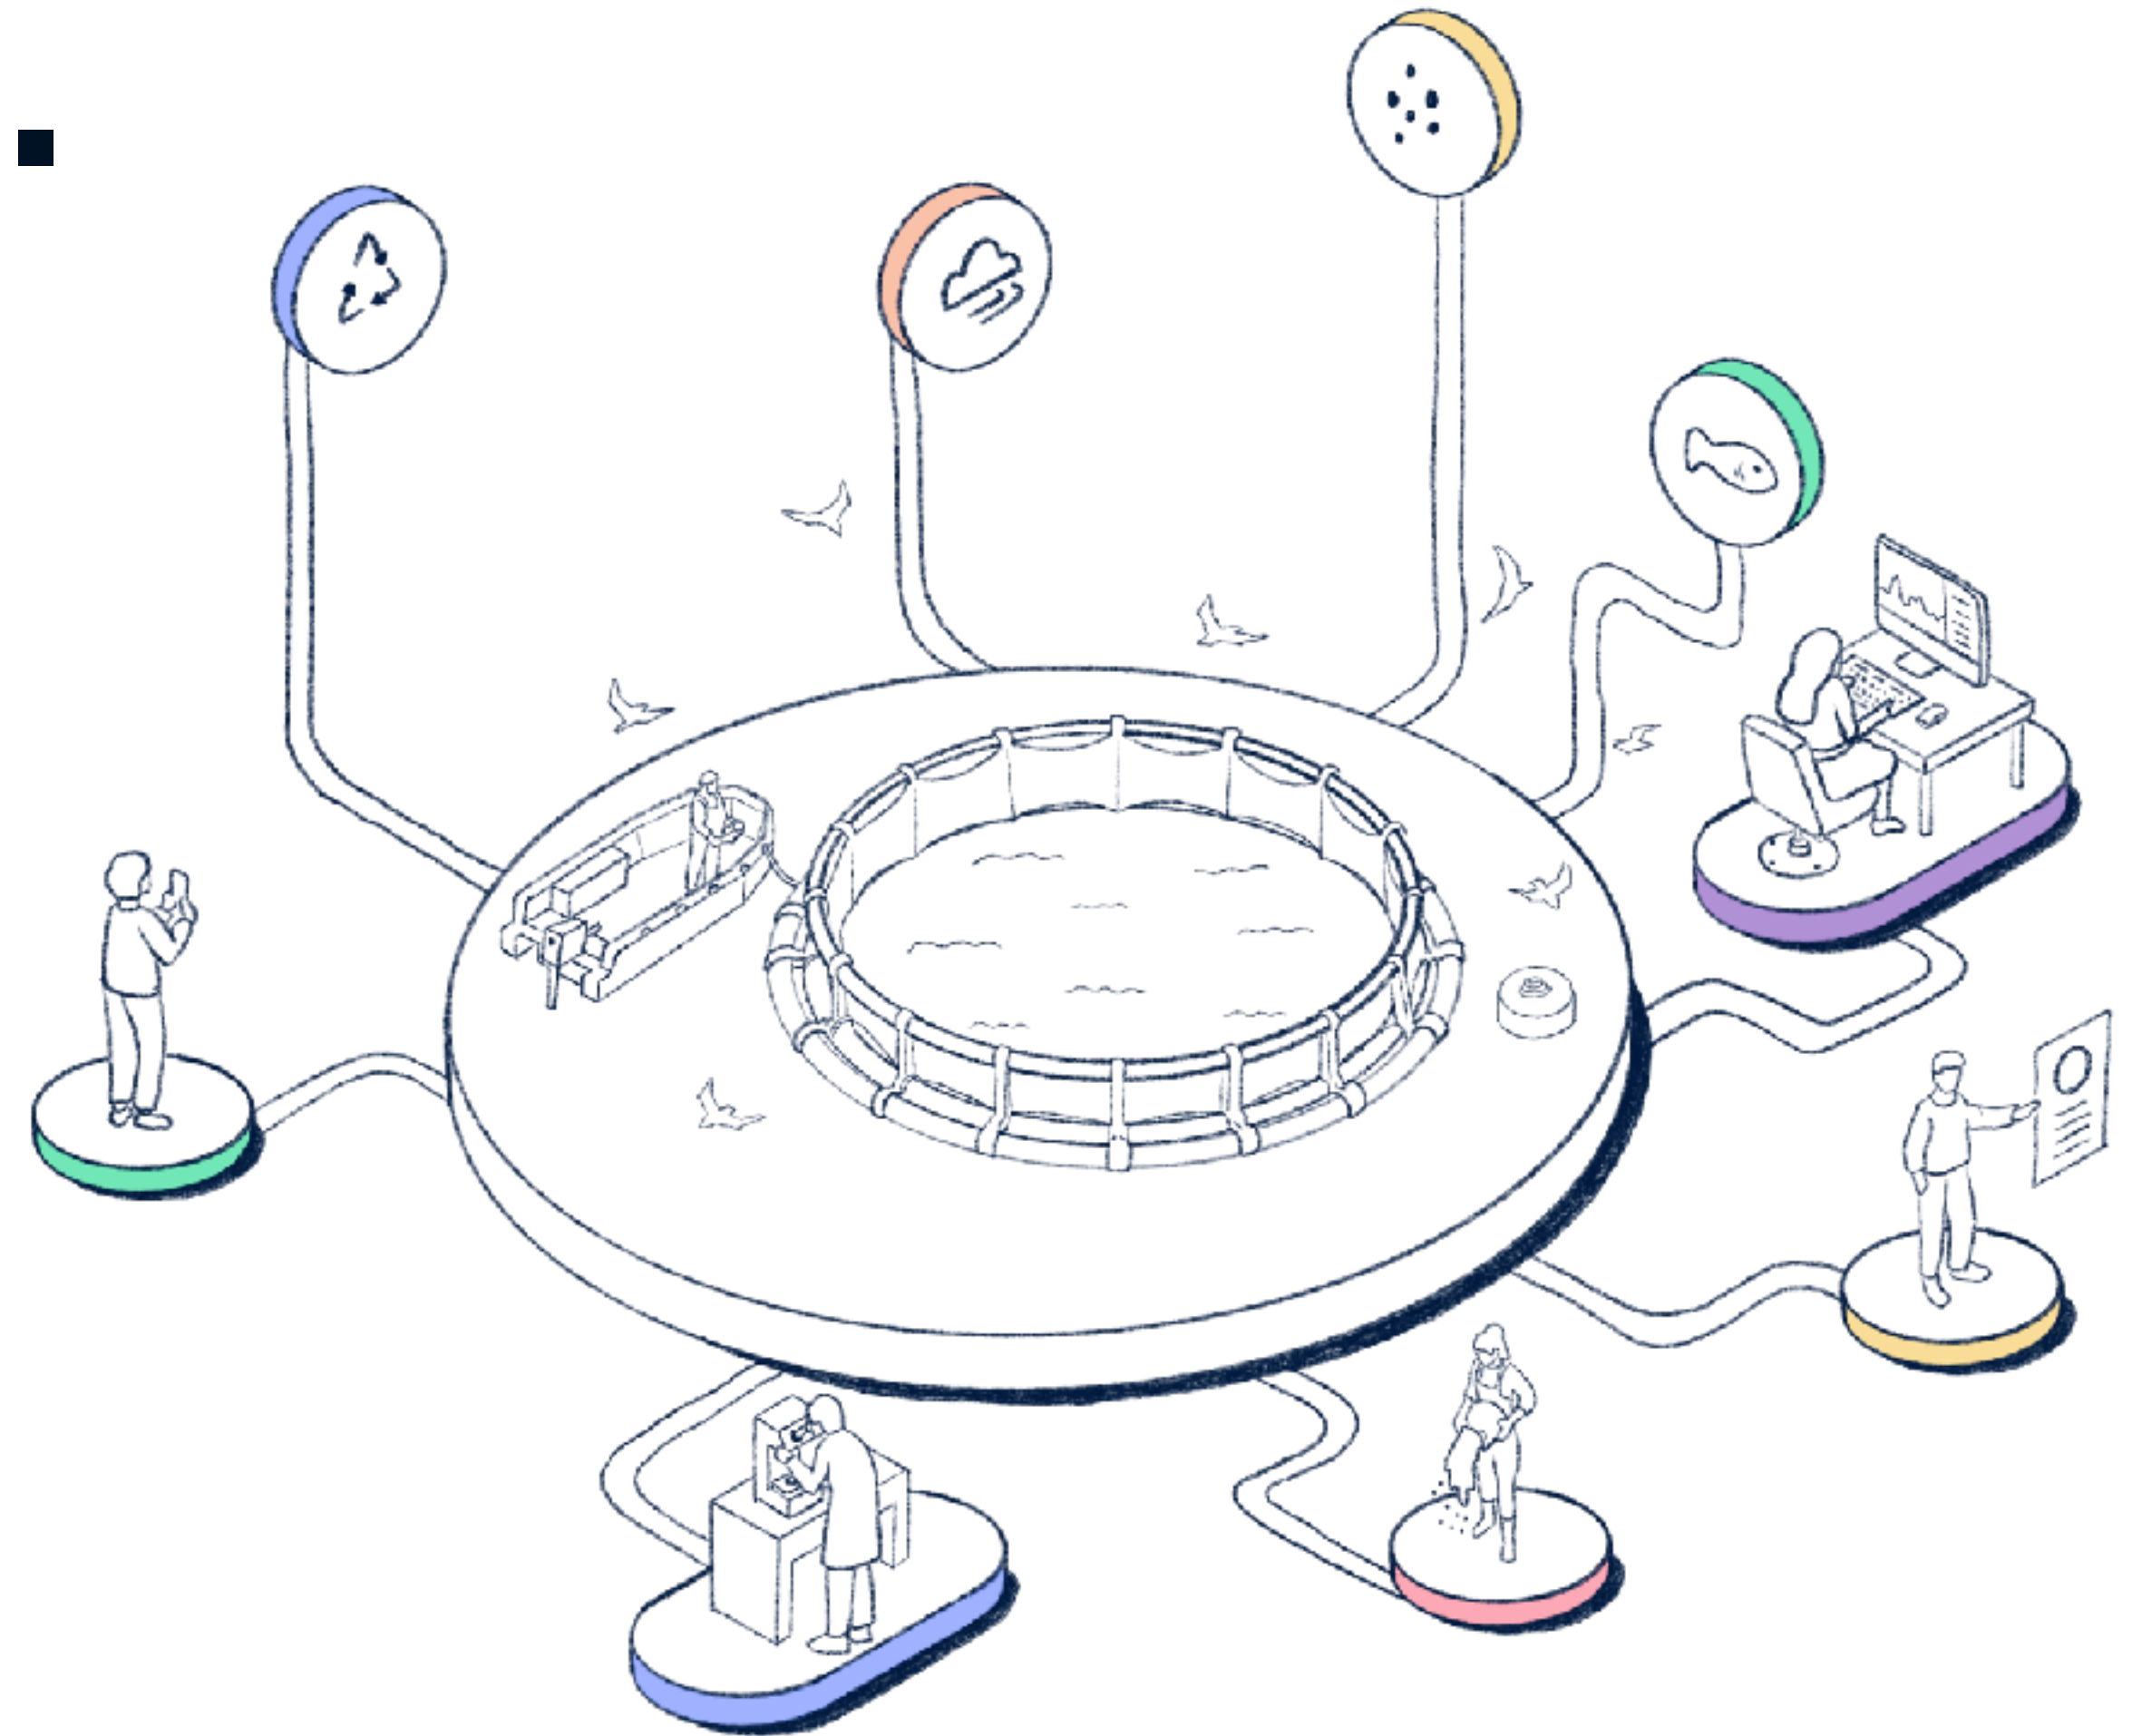

It requires **adaptability**, both regulatory and more specifically by location and facility. Everything is about equipping your biomass with the best **conditions** for well-being and growth.

Never have fish farmers faced more choices.

Before, outcomes were at the mercy of site **conditions**, **disease pressure**, and **unforeseen biology**.

Now the situation is completely different. Technology and **development** make it possible to **take action**.

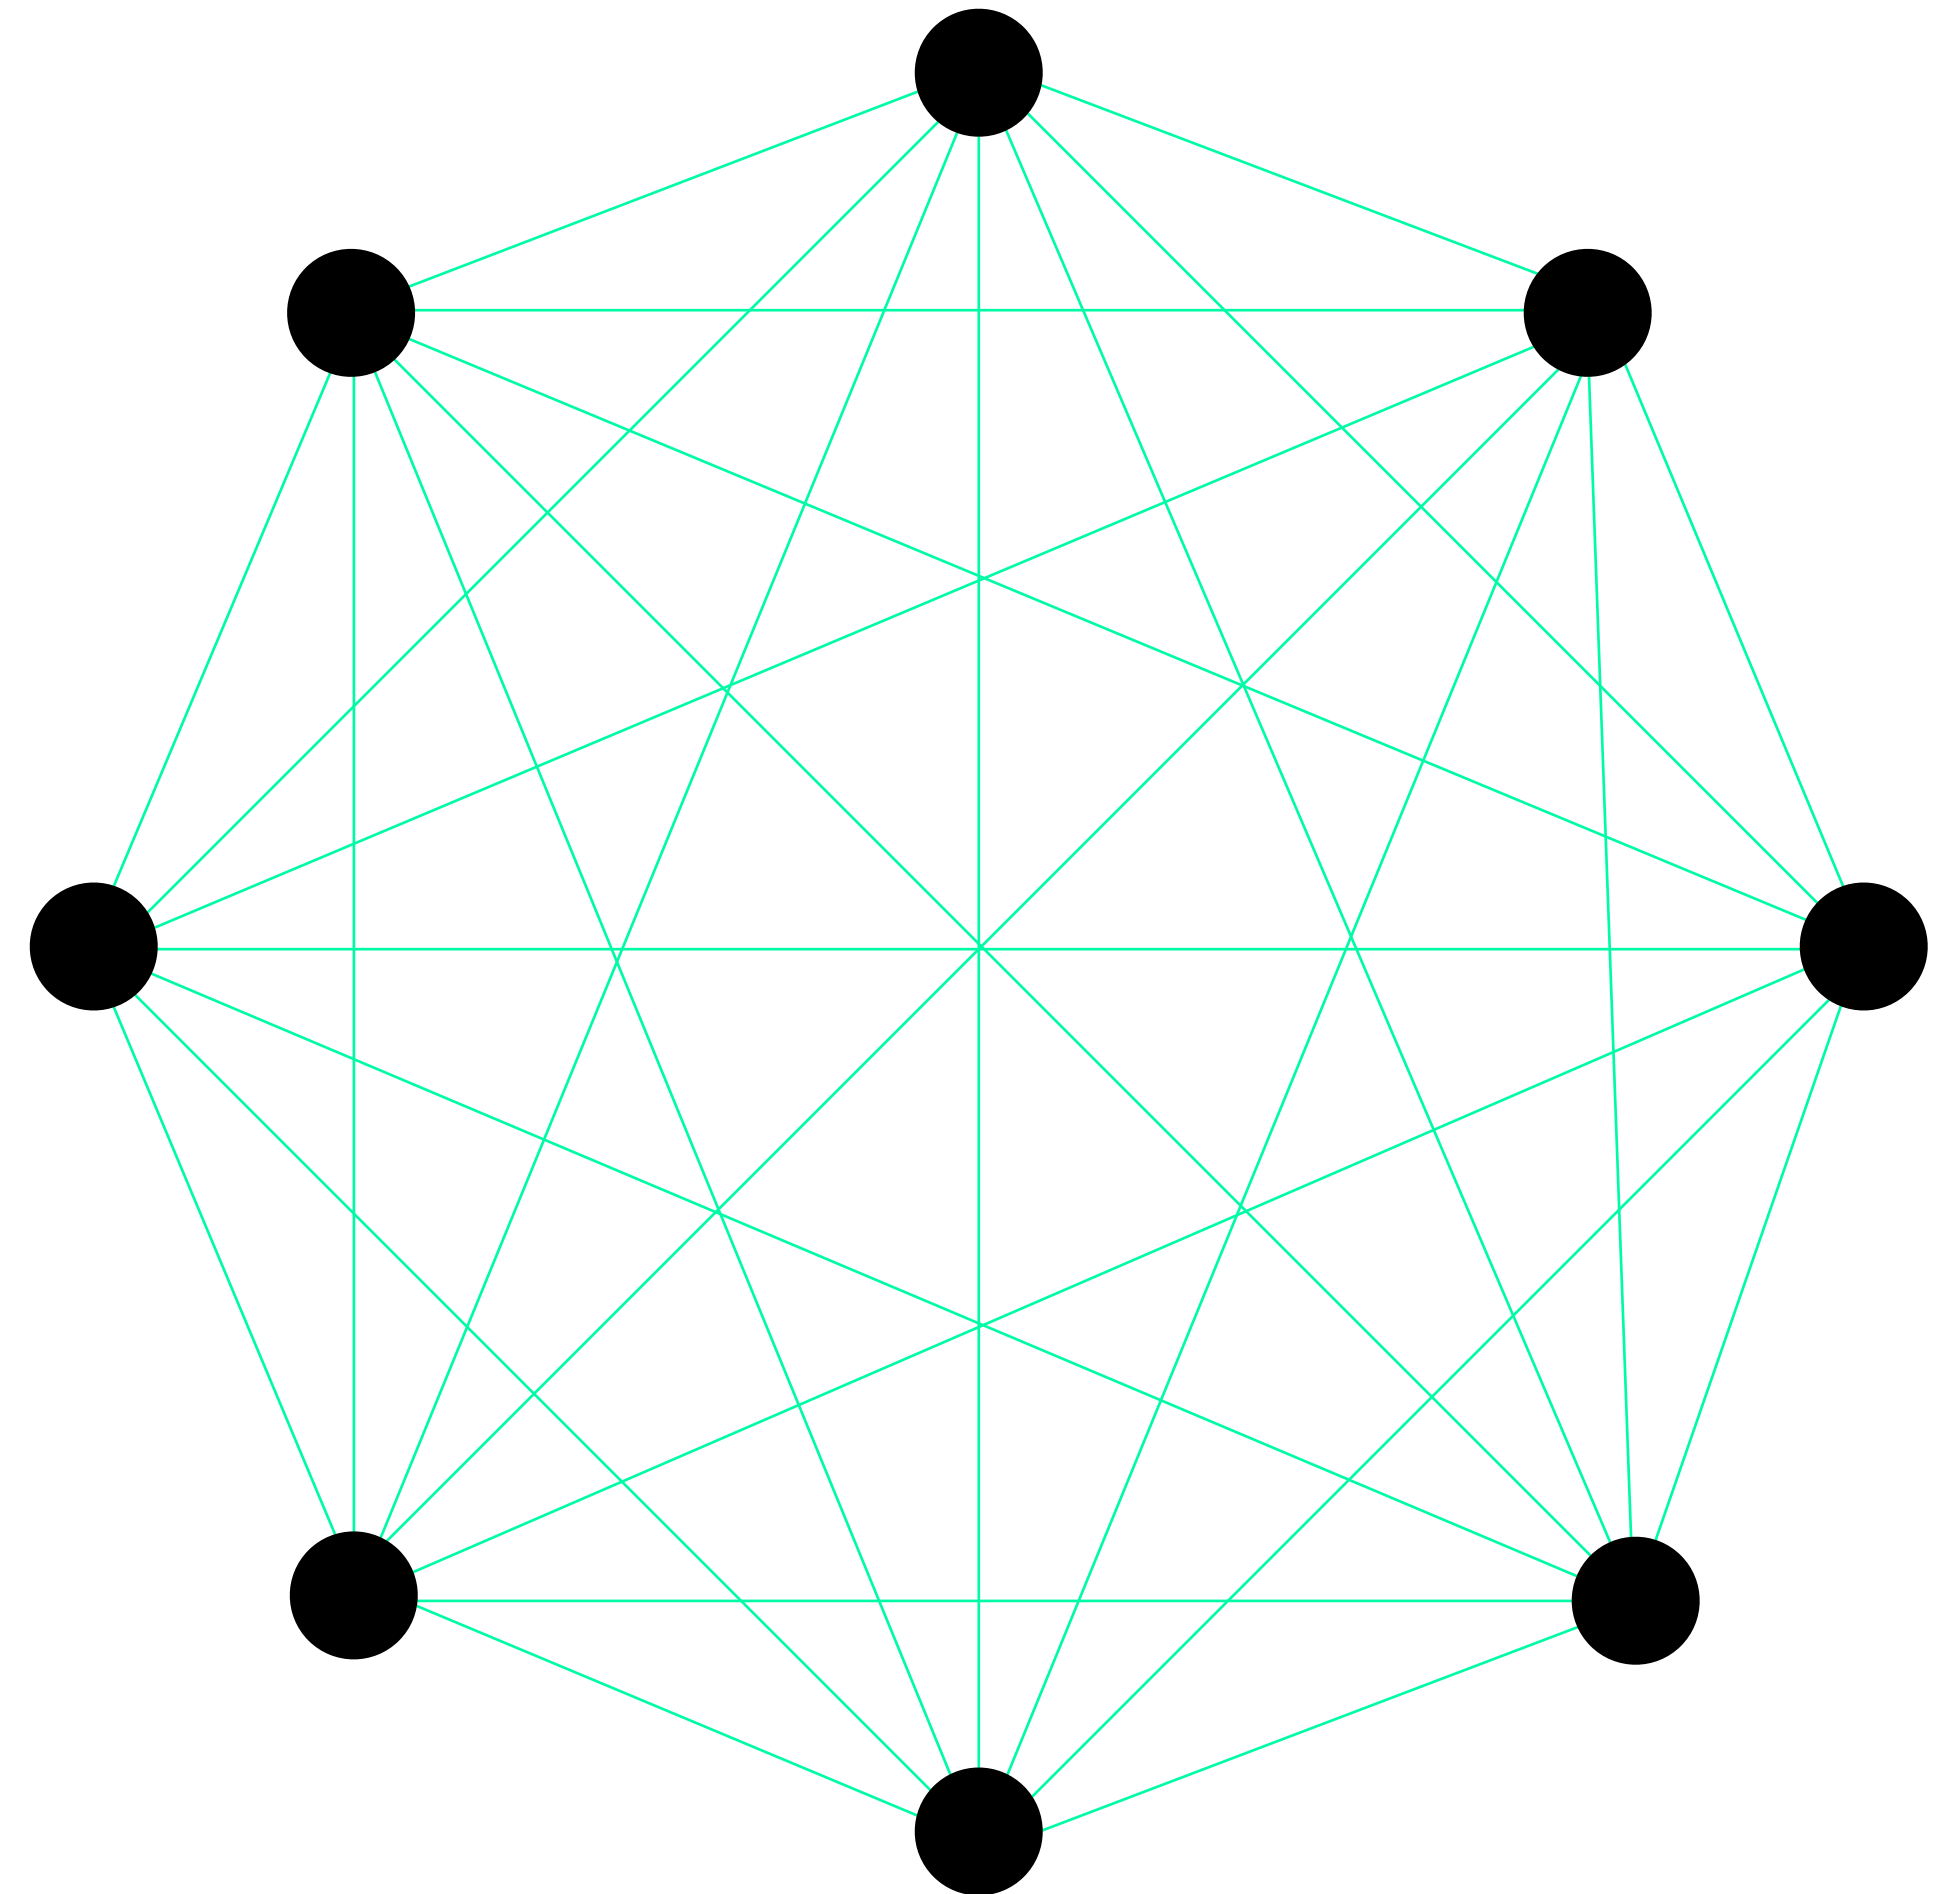

Increasing complexity

and the data follows suit

New technology and new production methods mean new challenges: more **complex** data, more **data sources**.

It becomes harder to cut through the noise. These challenges must be solved, and we must learn to **innovate** faster than our competitors.

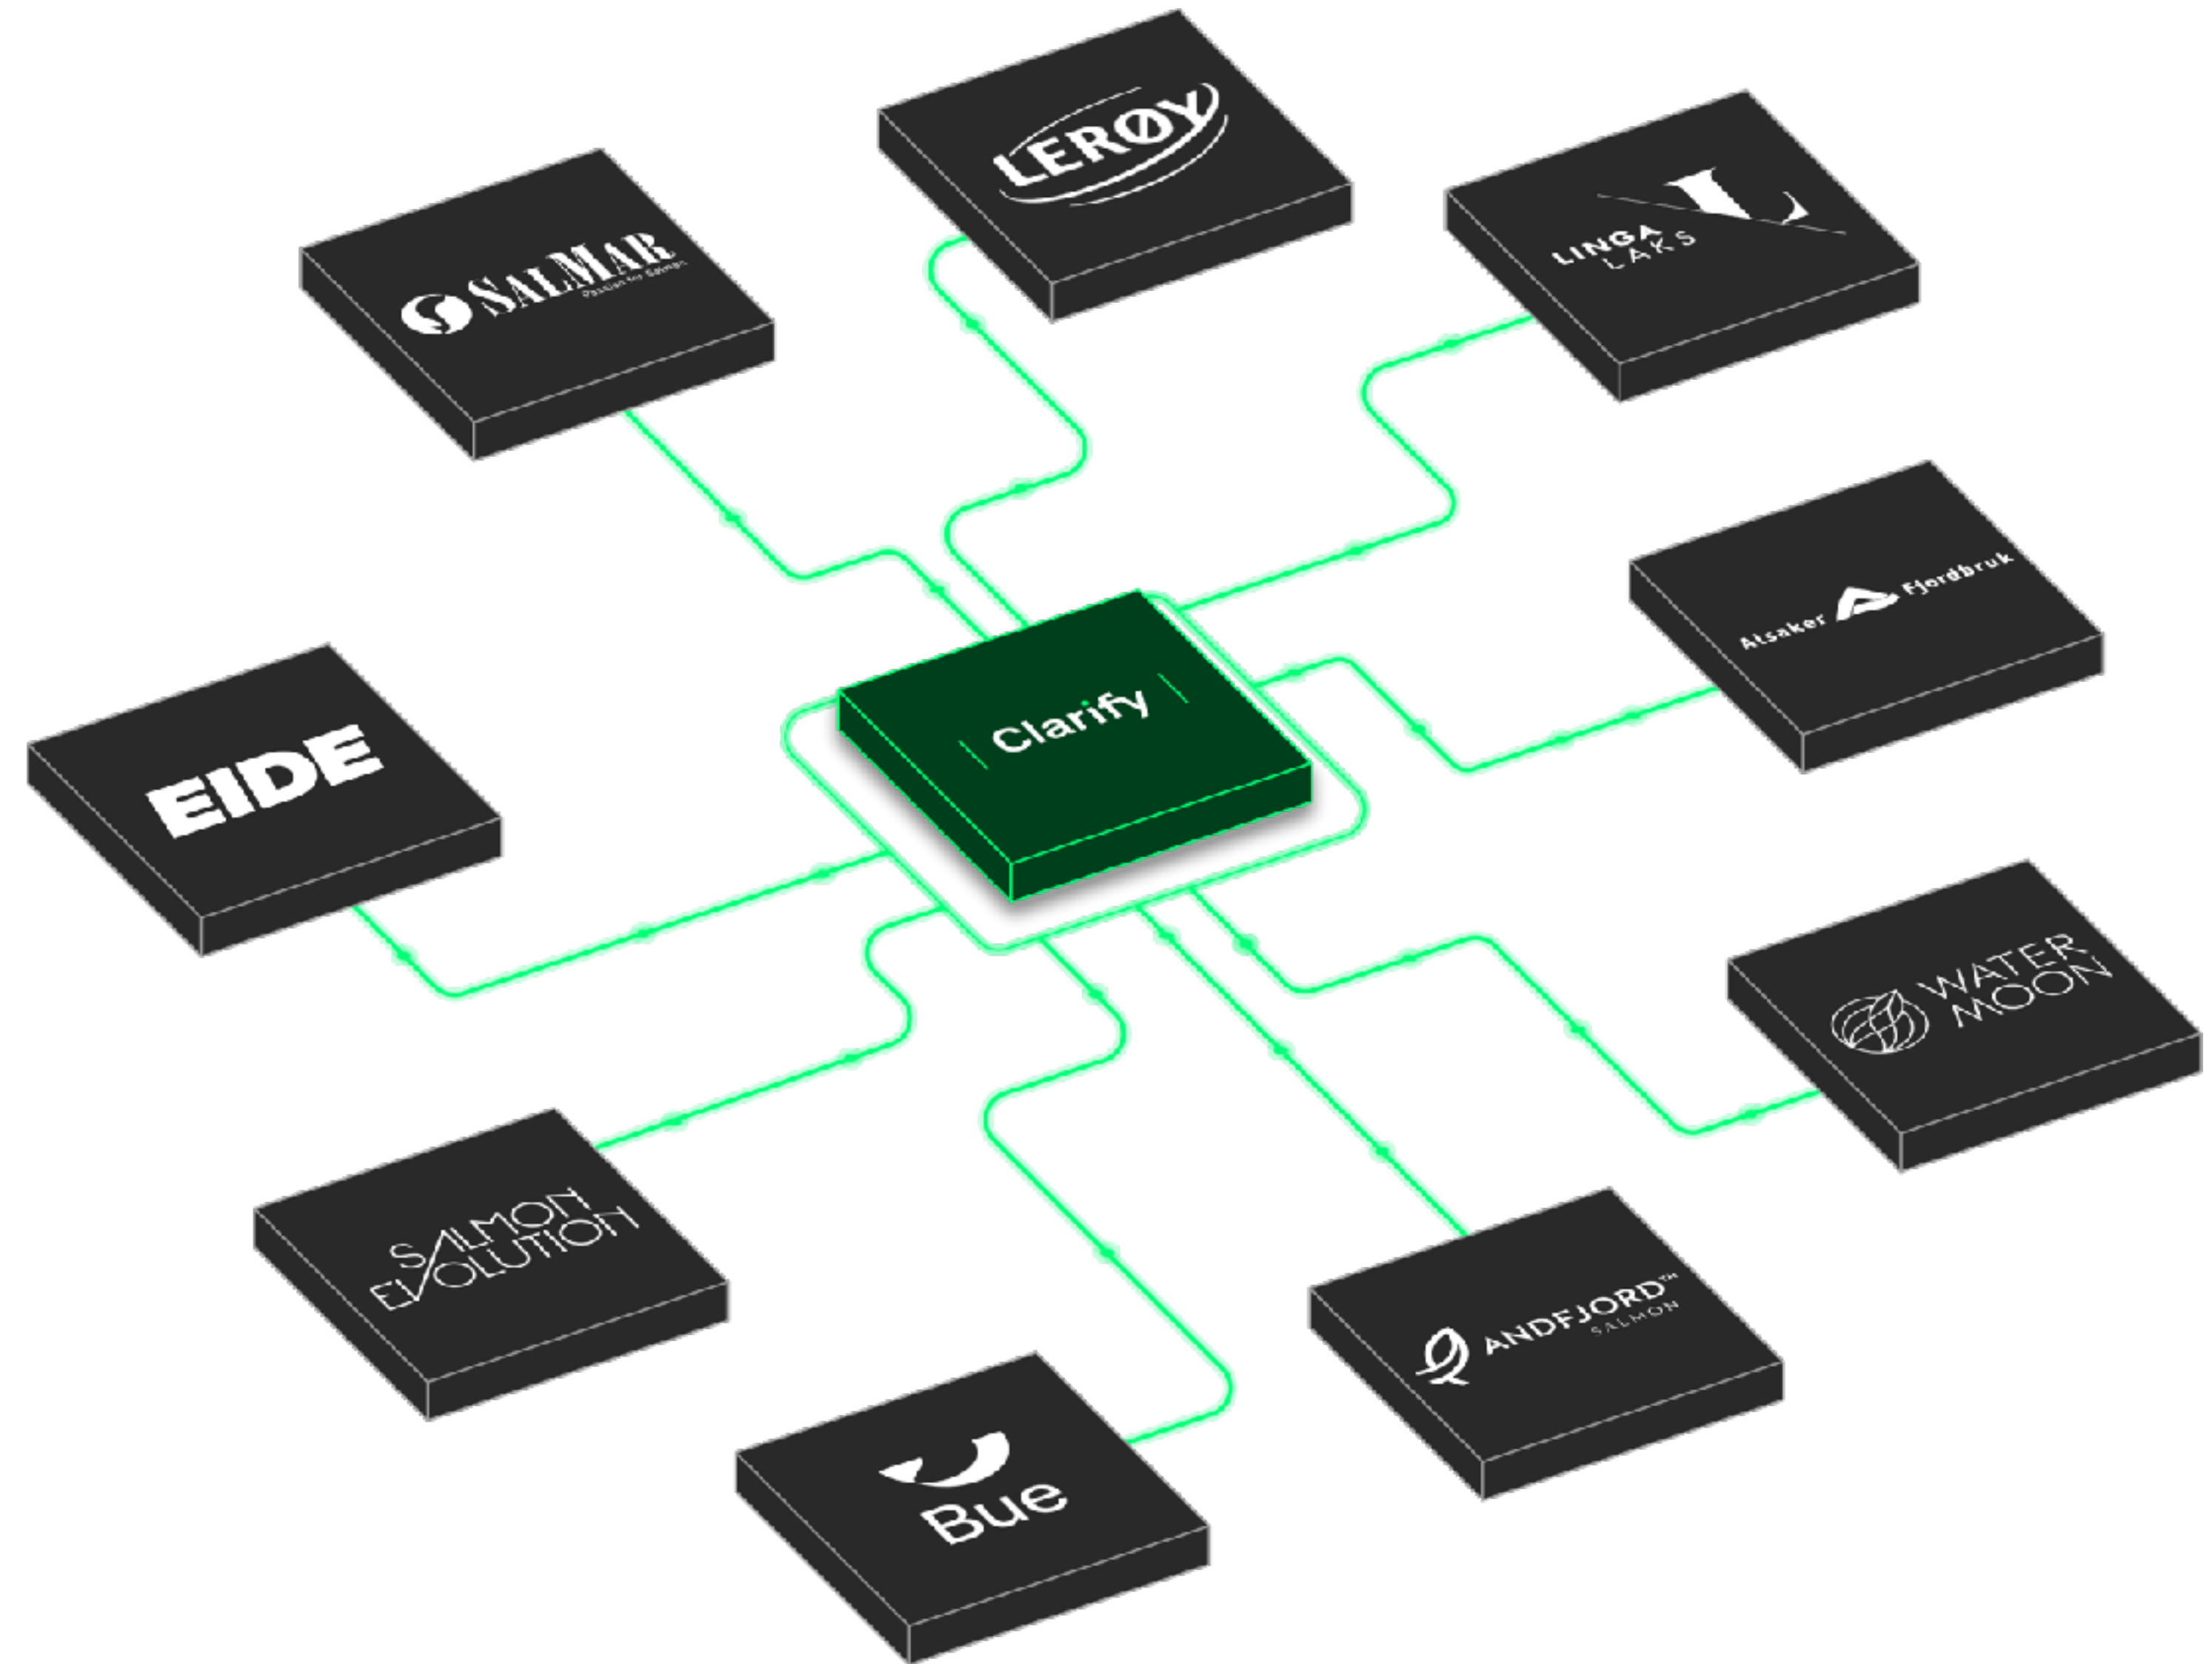

Data has never been more **important**.

TRUSTED BY INDUSTRY PIONEERS

Keep innovating

We are privileged to work with the leading **innovators** in the industry.

WATER MOON

An evolution of sustainable aquaculture
by fish farmers - for fish farmers

SALMON EVOLUTION

Extending the ocean potential™

HYPOTHESIS

Each site becomes an R&D unit

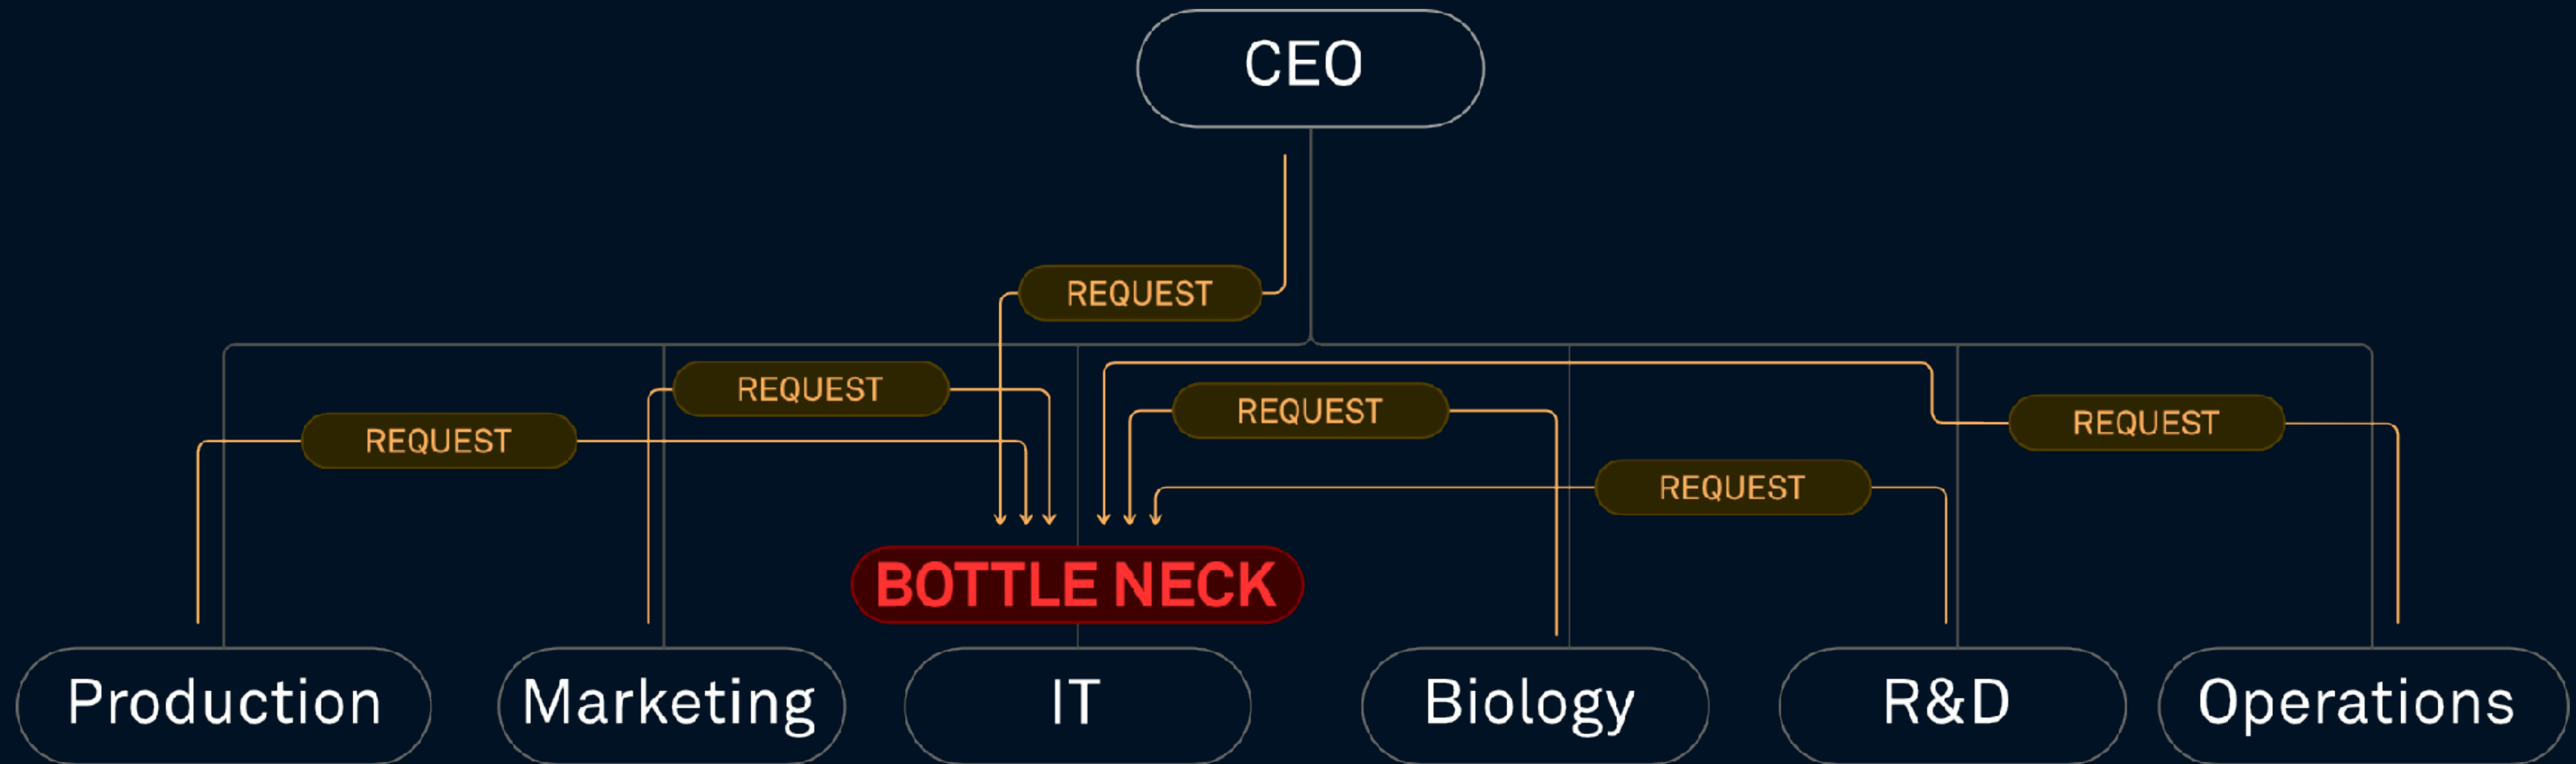

How do we arm our biomass for well-being and growth?

More and better data make each individual site into an **R&D-driven** unit.

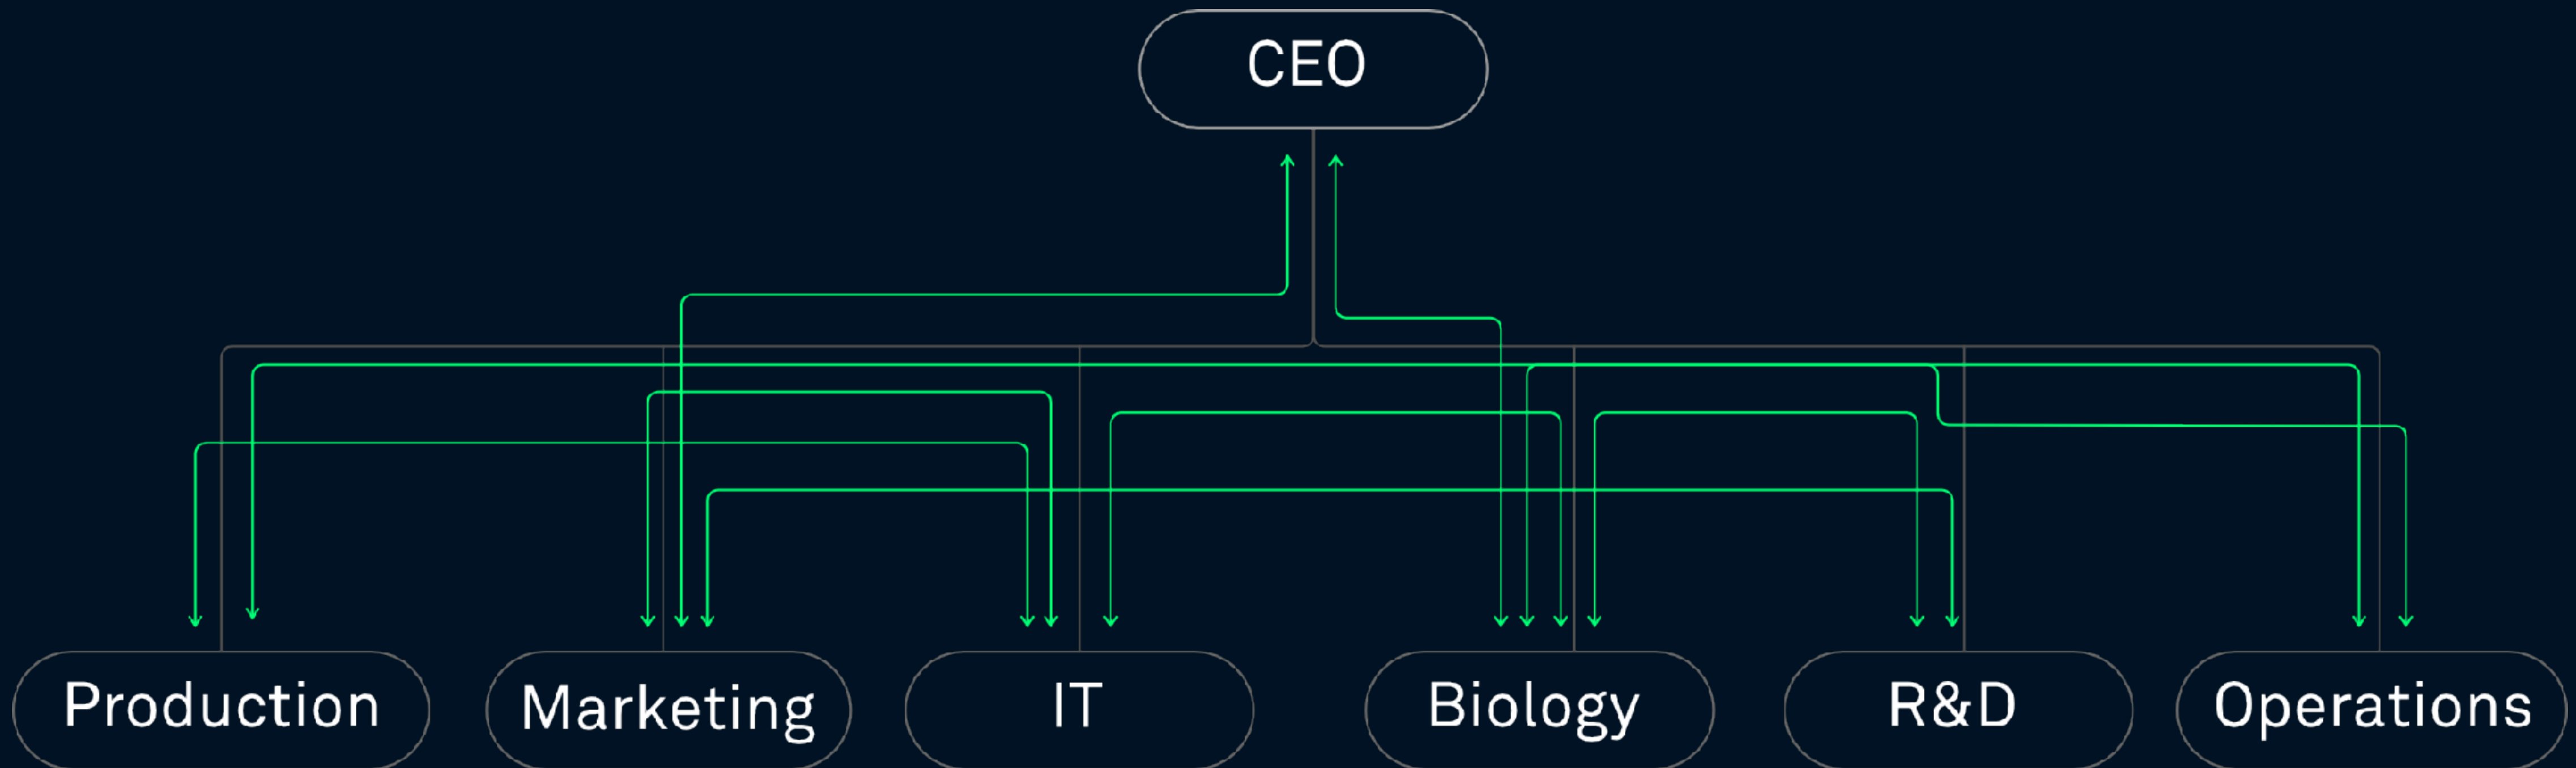

The farmer's job is to equip the biomass with the best **conditions** for **well-being and growth**.

The data task is to equip the organization to **understand and act** on what is happening.

Data was something you sought out

Now, every role is self sufficient

| But how does the future look? |

1. **Data finds you**
2. **Always the right context**
3. **Always timely**

Clarify

AqKva

DIGITALE

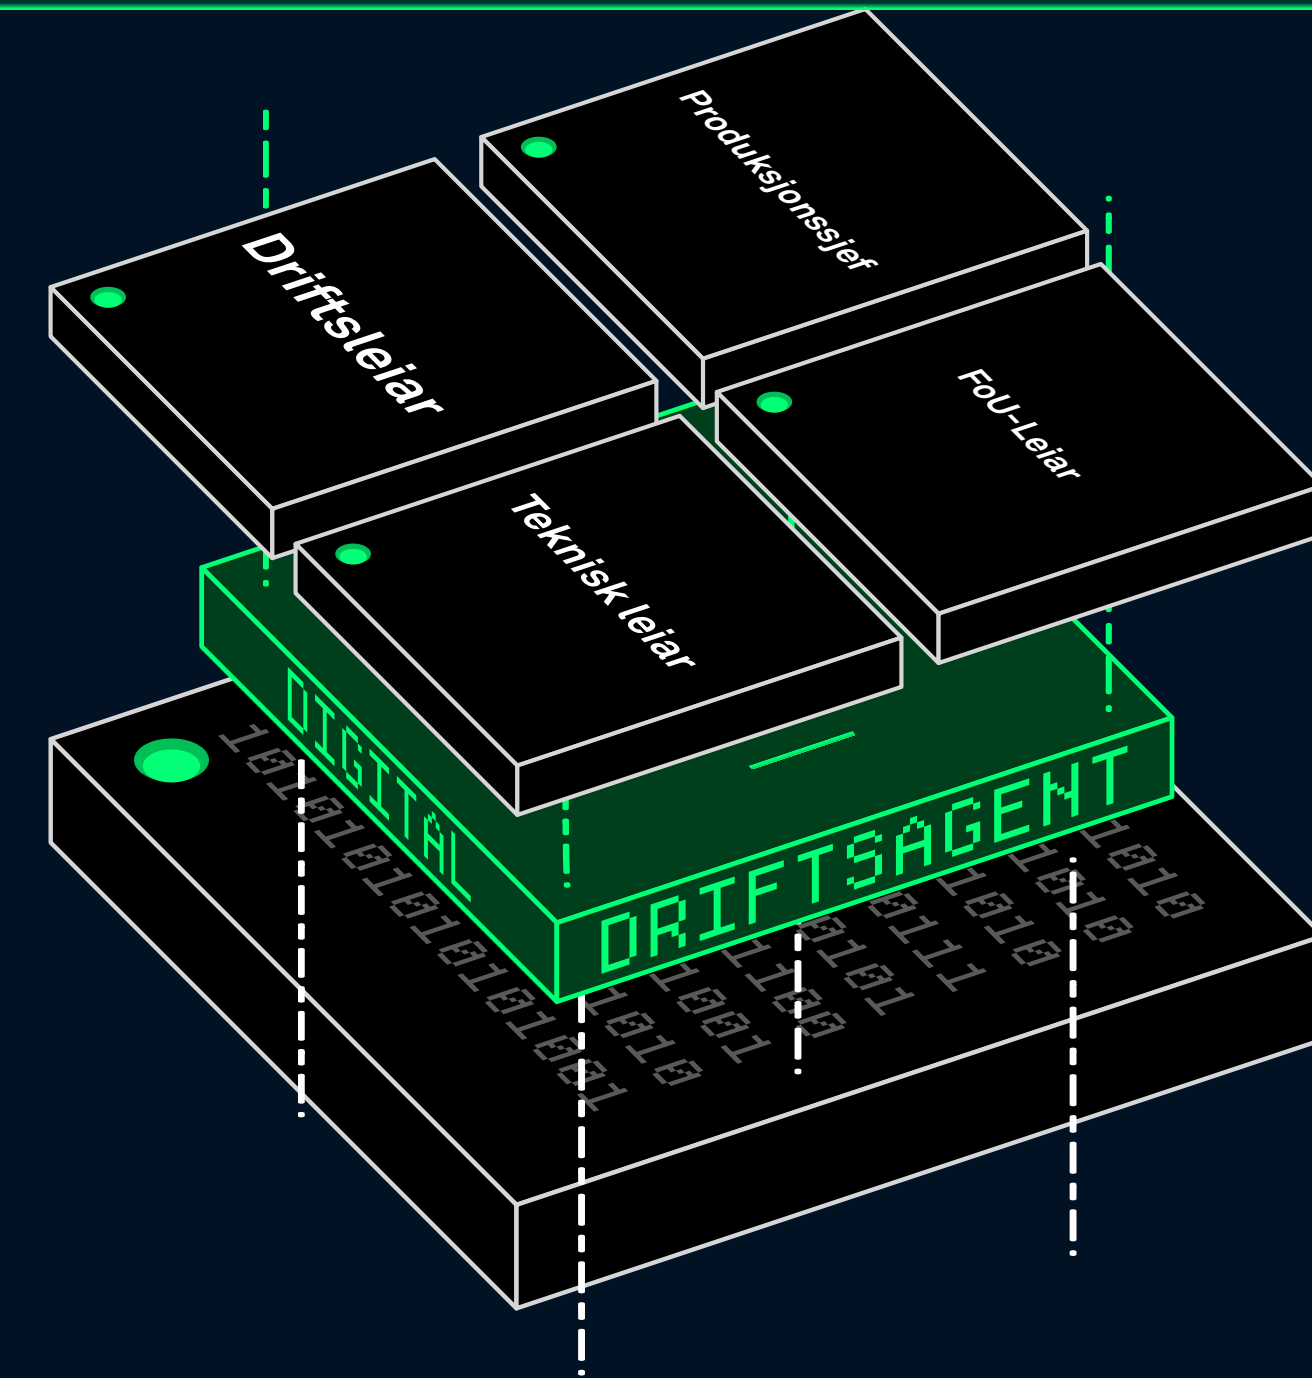

We're introducing

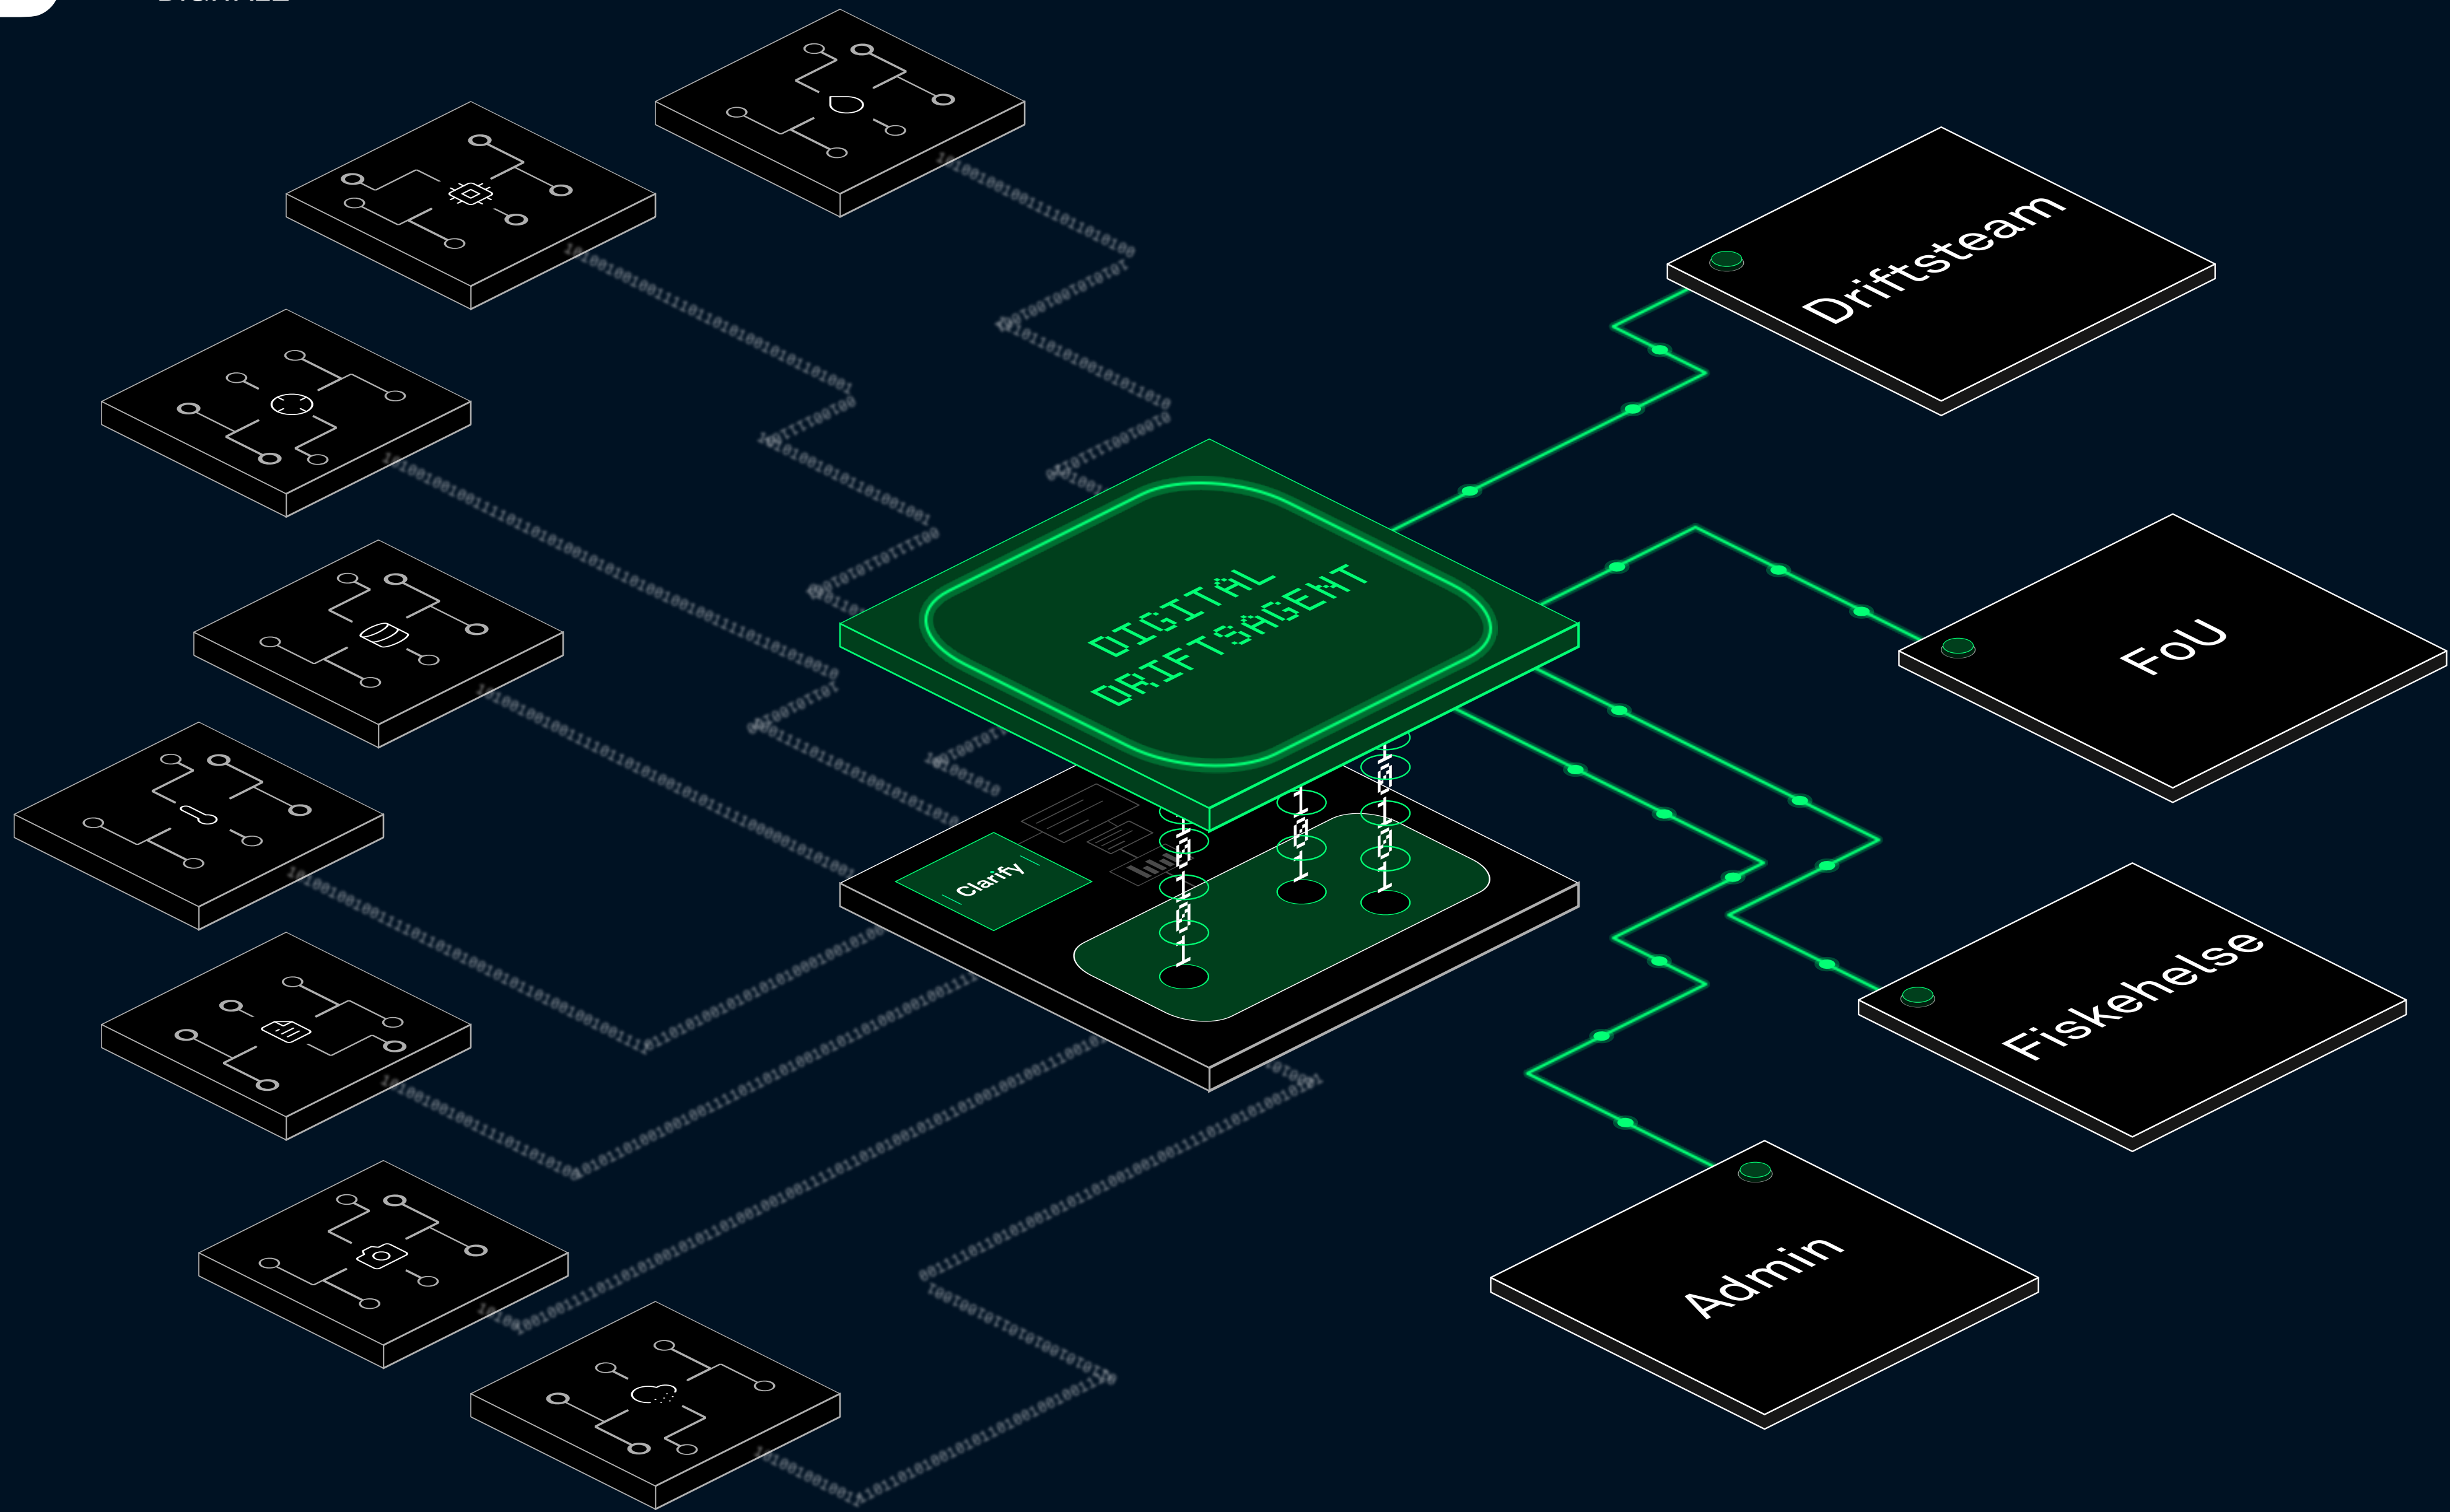

Din digitale driftsagent

Continuous delivery of timely and relevant information so you can succeed in your role.

Din digitale driftsagent er klar til nye oppgaver.

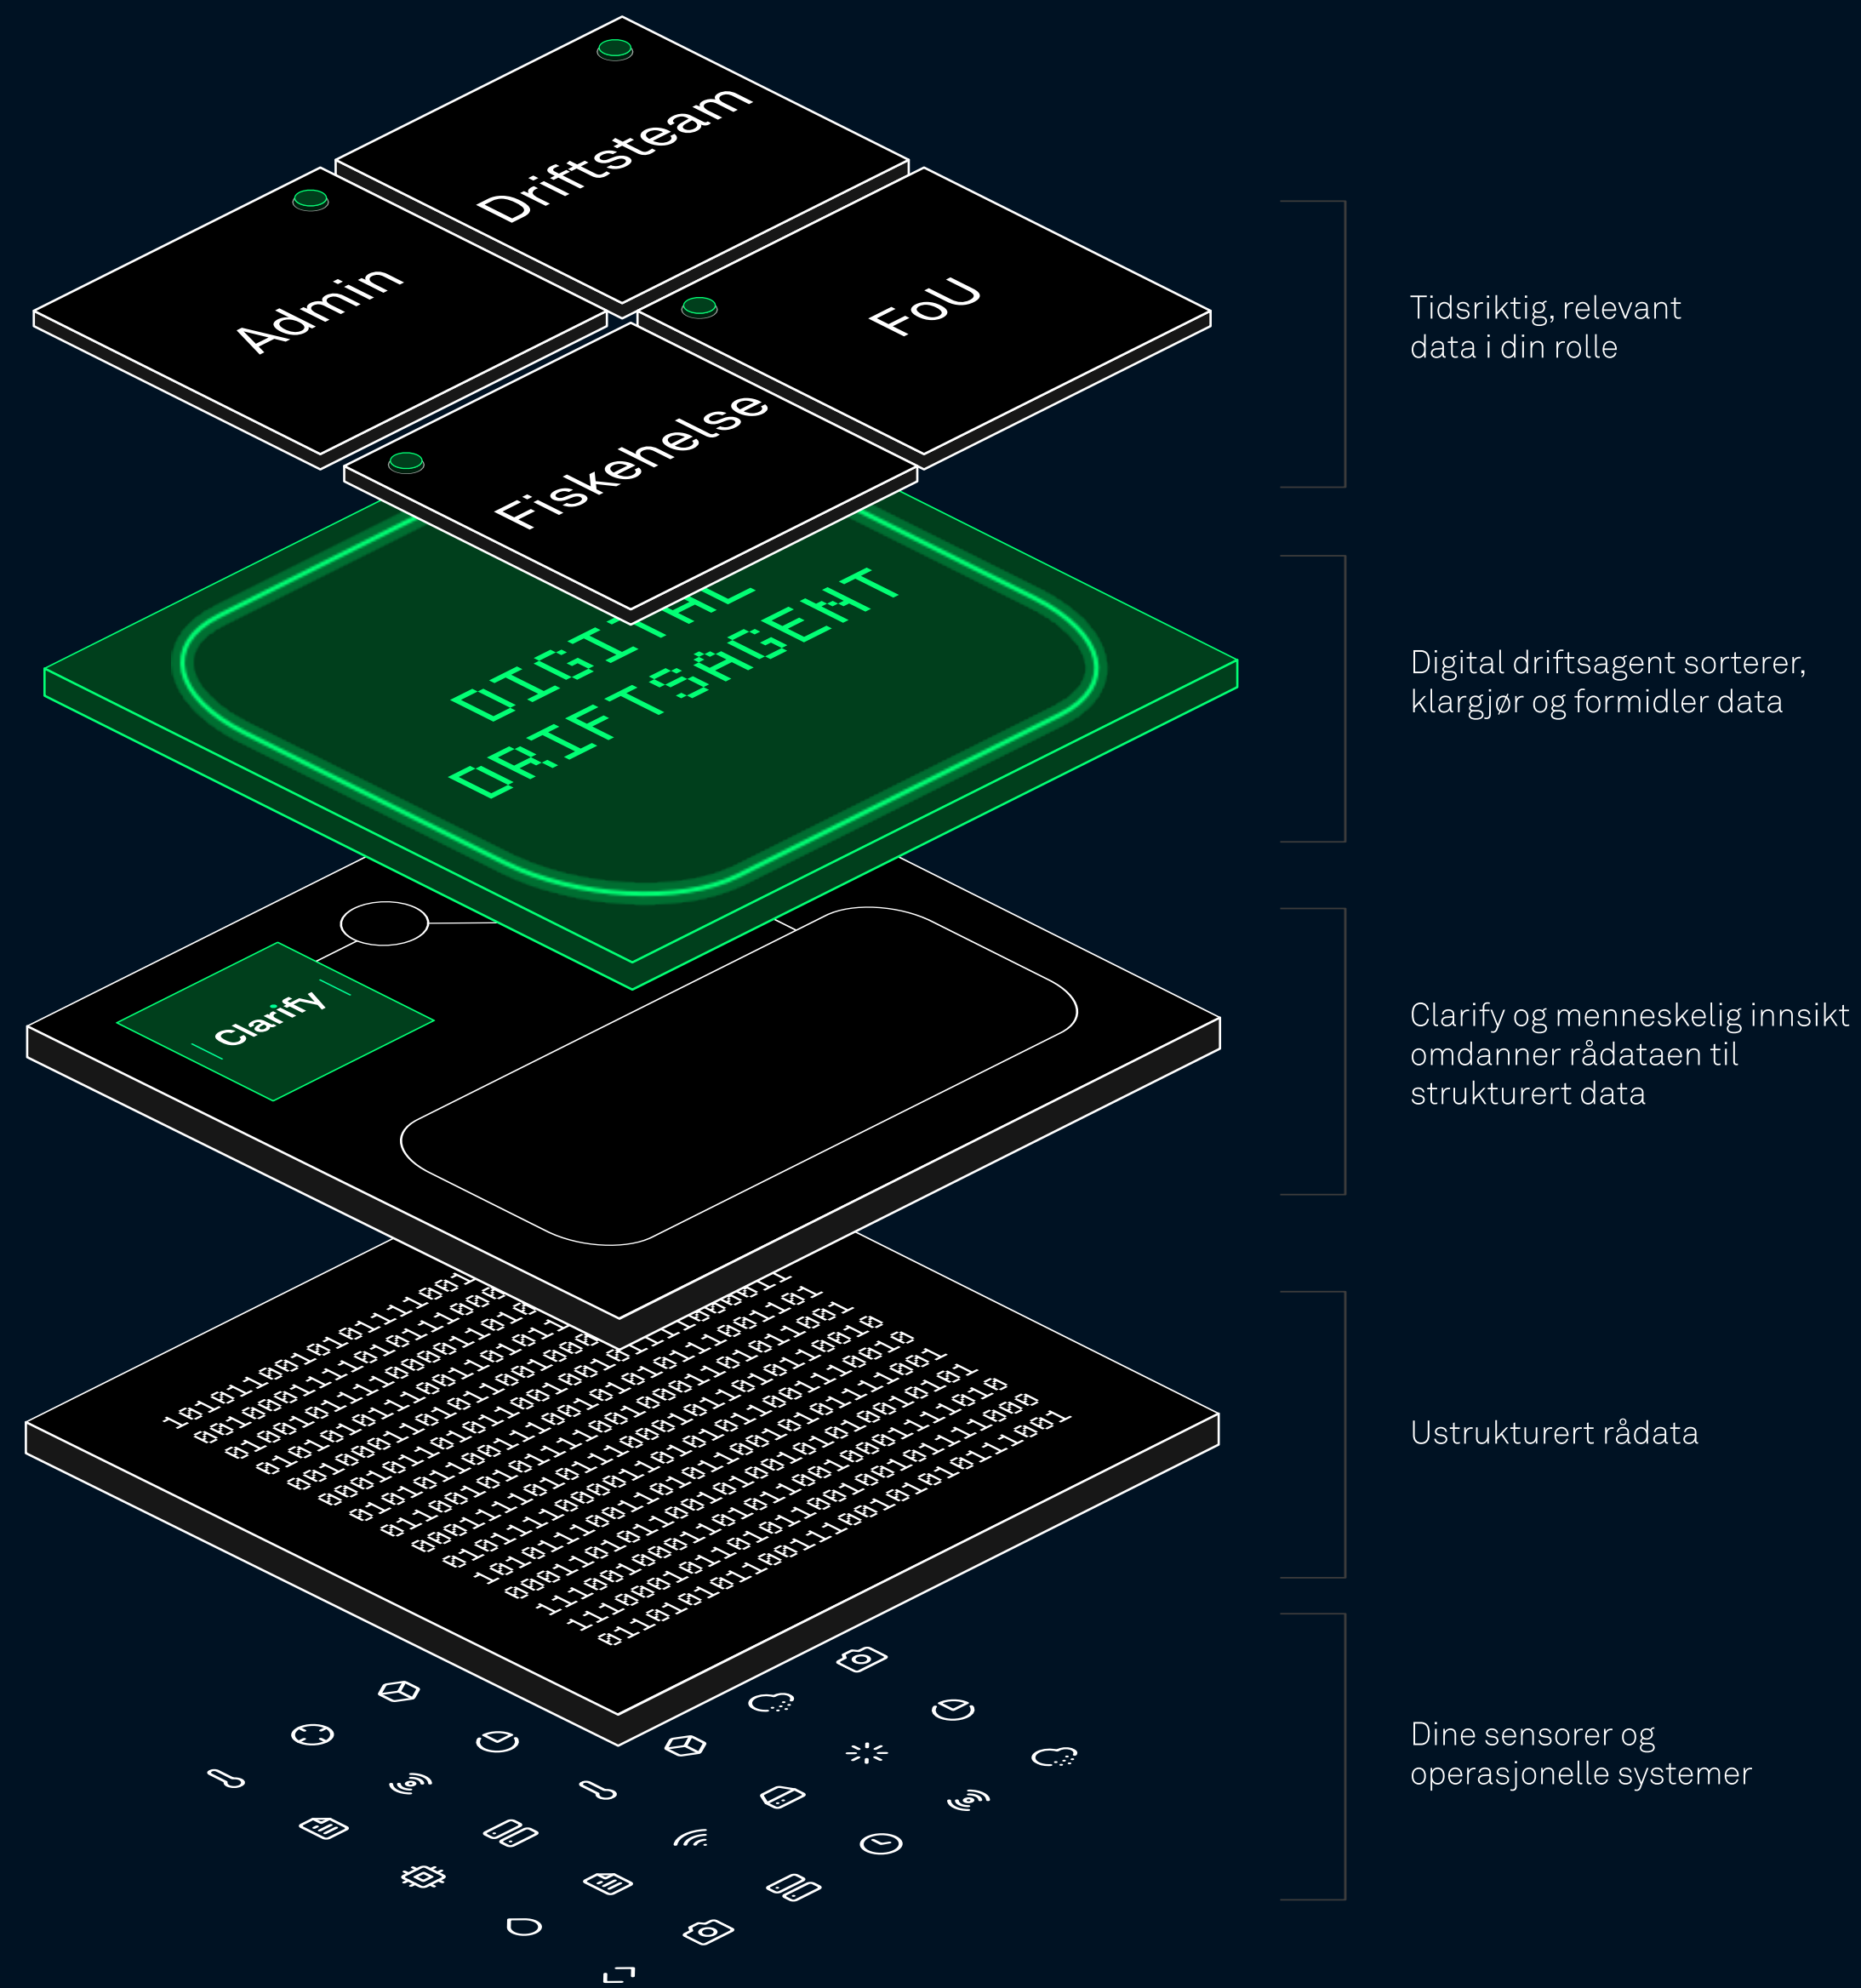

Clarify your data

Raw data becomes valuable only through **structure** and **human expertise**.

Clarify is where that transformation happens, **powering agents** that serve every role in your operation.

Without **clean, enriched data** as the foundation, even the most advanced AI produces more **uncertainty** than answers.
